

RT930S Silica Polyether Modified Defoaming Agent

Overview:

RT930S is a concentrated polyether siloxane containing gas-phase silicon, recommended for the grinding stage. It effectively eliminates various foams and demonstrates superior foam-breaking performance.

Product advantages:

- Particularly suitable for color paint formulations;
- High efficiency of bubble burst;
- Strongly recommended for the grinding stage.

Reference technical specifications:

Chemical composition: Polysiloxane-polyether copolymer. Contains fumed silica.

Effective rate: approximately 100%

Appearance: Colorless to pale yellow turbid liquid

Density: 0.98-1.08 g/cm³

Applying recommendations:

- Airless spraying
- Compressed air spraying
- Flexographic and gravure printing
- Brush application/roller application
- Self-leveling
- Immersion, flow coating, spray coating

Usability :

Water-based: ●

Oil-based: ○

Two-component 100%: ○

Radiation curing: ◎

Add during grinding: ●

Add during paint mixing: ◎

Solubility :

Water ○

Ethanol ○

TPGDA ◎

Butyl acetate ○

Solvent oil ◎

CELOTECH **RUICO**

Insoluble ○

Partially soluble ◎

Soluble ●

Typical application:

Wood Coatings

General Industrial Paints

Printing Inks

Protective Coatings

Recommended amount:

0.1-1.5% of the total formulation.

Description of the process:

- The long-term efficacy of the product depends on its specific formulation, and individual formulations should be tested separately.
- The product requires high shear for mixing;
- Can be added to the coating in either supplied or pre-diluted form;
- Stir before use.

Package and Storage:

Store in a dark place, keep unopened and stored at 5°C to 35°C. The product has a shelf life of 12 months from the date of production.

25kg per barrel, with customized packaging for customers.
